

PUF

Ambient Air Sampler

The PUF sampler is a polyurethane foam sampler used for the collection of volatile organic compounds and particulates. The PUF sampler utilizes a dual sampling module to collect air borne particulate as well as ambient semi volatile organic compounds. The VOC'S are trapped in the polyurethane foam substrates which are collect and sent to a laboratory for further analysis. Tisch Environmental PUF samplers are well suited for all applications that require the use of a high volume VOC sampler.
